

PRONOVOST PRESENTING ITS PRODUCT HIGHLIGHTS AT AGRITECHNICA 2011

Quebec, November 2011 - Machineries Pronovost, a Canadian leader in the conception and fabrication of snowblowers and hay handling equipment, will present its product highlights at Agritechnica 2011, from November 13 to November 19 in Hall 8, Stand F14.

Founded in 1969, Les Machineries Pronovost Inc. has been granted multiple patents over the years, hence confirming its commitment to innovation and research and development to ensure its growth. "We are constantly striving to improve our products. In this respect, we concentrate on customer benefits" said President of the company, Réjean Pronovost.

Under the motto "Connecting to performance", the following products will be featured in Germany:

- More than 60 snowblower models providing optimal performance in use with farm tractors, loaders or utility vehicles (from 18 HP to 300HP, P.T.O. or hydraulic drives);
- Auto-load bale handlers for round and square bales, with patented loading arm for turning and quick loading of the bales without stopping;
- Economical silage storage system for round and square bales (Silatube) using stretchable and recyclable plastic tubes which wrap around the bale and eliminate all contact with air, thus assuring unmatched forage quality.

Concerned with consolidating its position in the hay market, Pronovost recently acquired the Canadian company, AgLand Industries Inc., whose **Macerator 6620** is renowned for processing and producing high quality forage by conditioning hay for a super fast dry time while maintaining the maximum amount of nutrients and color.
